Read Book Ap Chapter 10 Photosynthesis Answers Overview: The Process That Feeds the Biosphere. Life on Earth is solar powered. The chloroplasts of plants use a process called photosynthesis to capture light energy from the sun and convert it to chemical energy stored in sugars and other organic molecules. Chapter 10 - Photosynthesis |

## **Ap Chapter 10 Photosynthesis Answers**

Chapter 10: Photosynthesis 1. What are autotrophs and heterotrophs? Autotrophs are “self-feeders”; they sustain themselves without eating anything derived from other living beings. Heterotrophs obtain their organic material by living on compounds produced by other organisms. 3. Write out the formula for photosynthesis, carbon dioxide ( $6\text{CO}_2$ )

# Download Ebook Ap Chapter 10 Photosynthesis Answers

## **Chapter 10: Photosynthesis**

Almost all heterotrophs are completely dependent on photoautotrophs for food and for oxygen, a by-product of photosynthesis. Concept 10.1 Photosynthesis converts light energy to the chemical energy of food. All green parts of a plant have chloroplasts. However, the leaves are the major site of photosynthesis for most plants.

## **Chapter 10 - Photosynthesis | CourseNotes**

Carbon dioxide reacts with water and energy from the sun to produce glucose and oxygen. Photosynthesis is another example of a redox reaction where carbon dioxide is reduced to glucose and water is oxidized to oxygen. The electrons increase in potential energy as they move from water to sugar (endergonic). The energy is provided by the sun.
